

**Since the summer ground breaking for the Pentagon Memorial on-site work has progressed steadily. In preparation for construction efforts mass excavation is nearly complete.**

**Concurrently, while dirt removal is underway, the Memorial design team is working closely with the US Access Board (USAB), US Department of Justice (USDoJ), and the DoD Disability Group. The latest Memorial design modifications demonstrate their joint efforts to provide an accessible Memorial.**

**In early October, the project team will install a Memorial Unit mock-up for on site testing. The completed Memorial Unit prototype is expected on site in early December. Following its arrival, 9/11 Families and Government representatives will review the prototype for approval.**
